

BICOM[®]

Cause-oriented testing and therapy!

For the wellbeing of animals

BICOM[®] BIORESONANCE METHOD
GENTLE HELP FOR MANY COMPLAINTS!

WE WANT YOUR
ANIMALS TO
BE WELL!

Dear animal friend,

Our therapeutic goal is to provide your animals with the best possible care. For this reason, we have included the BICOM bioresonance method in our treatment spectrum.

The BICOM bioresonance method is a gentle, holistic procedure that has been used in both human and veterinary fields for more than 35 years.

Many successful treatments and testimonials from enthusiastic therapists and happy pet owners confirm the positive effects.

On the following pages you will get a brief insight into this gentle but effective procedure.

***BICOM Bioresonance:
The gentle and stress free
treatment is also suitable
for sensitive animals***

GENTLE AND SIMPLE

The BICOM® Bioresonance method

The BICOM bioresonance method was developed over the last decades in cooperation with doctors & naturopaths from the veterinary and human medicine. In the meantime it is in use all over the world. Doctors recognise it as a sensible method, to alleviate complaints and help animal patients more comprehensively.

The BICOM Bioresonance method is a biophysical method used in the diagnosis and treatment of various diseases. It is a very useful addition to conventional medicine.

Too many stressful factors are detrimental to animal health

Today, animals are exposed to many kinds of stress:

- Environmental toxins
- Exhaust fumes
- Feed additives (e.g. attractants and preservatives)
- Chemically contaminated drinking water
- Electrosmog (animals are particularly sensitive to this!)
- Pesticides
- Medicines etc.

Birds, mammals and reptiles, like humans, are made up of about two-thirds water. This body fluid is not only the cell's nutrient medium, but also serves as a "hazardous waste dump" for pollutants, when the excretory organs such as the liver, gall bladder, kidneys, intestine etc. are overloaded. In this way, the pollutant steadily accumulates and burdens the body.

The role of self-healing powers

Animals have an excellent potential for self-healing. They possess a phenomenal regulatory system, with the help of which even extraordinary influences on the body can be balanced repeatedly. However, if too many or too heavy stresses are exerted on the organism over an extended period of time, this can inhibit or even block the body's ability to regulate and heal itself.

This can manifest as disturbances of the general condition, behavioural disturbances or also through organic changes and corresponding symptoms of disease.

With the BICOM device, these stress factors can be detected and their effect on the animal's body determined. This is very quick and painless.

Severe, many, or long-lasting stresses can overwhelm the animal's self-healing powers

ANIMALS
SENSE THE
POSITIVE
EFFECT

Our animals deserve the best possible treatment

The BICOM bioresonance method offers decisive advantages:

- absolutely painless and therefore stress-free for your animal
- without injections and medication
- without harmful side effects
- suitable for small and large animals

The treatment is carried out with the BICOM device. Animals find the treatment to be pleasant and can stay relaxed during process.

According to numerous existing experiences and reports, the BICOM bioresonance method is well suited to counteract a wide variety of complaints.

Determine stresses individually & precisely and treat them immediately

Testing and therapy with the BICOM® bioresonance method:

1. Causal testing

The painless test procedure is used to determine the presence of intolerances, which organs are weakened, and whether toxins have a negative effect on the animal's body.

2. Therapy

The test result determines the further procedures with BICOM device. Animals find the treatment pleasant and can stand, sit or lie down in a relaxed manner. Since both treatment and testing are completely painless, they do not cause any additional stress for the animal.

The treatment duration is usually 10 to 30 minutes. The number of treatments depends on the severity of the condition and the duration of the illness.

The aim of the therapy is to reduce the effects of pathogens and to promote self-healing powers and the ability to regulate.

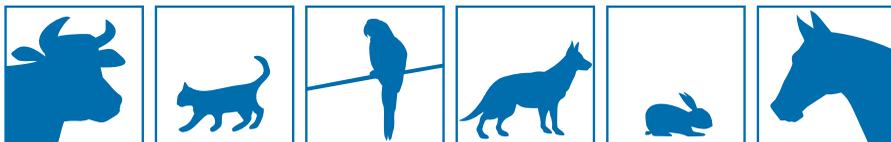

How can you effectively support your animal's BICOM treatments?

Animals will have an increased urge to drink after the BICOM treatment. Therefore, provide plenty of fresh, low-mineral water for them.

Feed your animal according to the recommendations of the therapist. During the entire treatment period, please do not give sugary feed, e.g. treats, biscuits. This is because sugar favors many diseases related to the intestines.

Tiredness after therapy or increased panting are positive reactions to the therapy and usually subside within a short time.

We want your animal to be well!

The BICOM bioresonance method, like homeopathy, acupuncture and other complementary therapy methods belongs to the field of regulatory medicine. Within complementary medicine, the BICOM bioresonance method is recognized as a proven therapy method. However in conventional medicine, the bioresonance method is not the subject of scientific research and is not yet recognised.
